Solutions for the Real World

PDSA, Inc.
Framework Utilities

The PDSA .NET Productivity Framework provides your developers with all of the core features necessary to build world-class business applications without writing code from scratch. The PDSA Framework is written using all the latest features of Microsoft .NET Framework Version 4.x. All of the base classes in the framework are written in C#. All samples and application templates are in C# and Visual Basic. PDSA's Framework fully supports both languages. PDSA's Framework is written using an N-Tier, SOA and Model-View-View-Model (MVVM) architecture and supports ASP.NET Web Forms, MVC, WPF, Silverlight, Windows Phone, Windows Store, Windows Forms and WCF. All this means you will be on your way to creating great business applications in no time at all.

The PDSA .NET Productivity Framework has many utilities that will help you to develop your .NET applications and help you maintain, configure, and deploy your .NET applications. Many of these tools were created using WPF and placed into this Outlook-style interface.

Business Value

Having tools to help a developer create new applications and tools for administrators to administer their applications through an easy to use interface greatly enhances productivity.

Special Features

This application takes advantage of animation for a very nice user interface effect. A unique Outlook-style menu system is used to keep all tools easy to access. A licensing system is used to enforce a 60-day trial mode.

Technology Used

Microsoft's Visual Studio

Windows Presentation Foundation (WPF)

C#

PDSA .NET Productivity Framework

Haystack Code Generator
