

On-time and on-budget delivery of projects

Every IT shop needs to have an Application Lifecycle Management (ALM) process in place. If you are not sure if you have one, or if yours covers everything, PDSA will find out. Discover if your ALM matches industry standard guidelines and if your people are actually following the processes.

Why Choose PDSA...

PDSA develops custom business applications specializing in web and mobile technologies, enabling workflow management, operational efficiencies, and effective information management.

PDSA was founded in 1991 and since has successfully delivered advanced custom application software to a wide range of customers and diverse industries. With a team of dedicated experts, PDSA delivers cost effective solutions, on-time and on-budget using innovative tools and processes to better manage today's complex and competitive environment.

Your Team... Effective!

The PDSA ALM Review helps you identify the best IT practices to ensure business success. Application Lifecycle Management includes project management, hiring of developers, and standards for development, testing, QA procedures and much more.

Our ALM Review presents the following to you:

- **Findings:** Is your ALM up-to-date and do your people follow the processes.
- **Reasons:** The reasons why your ALM processes might not be followed.
- **Recommendations:** Suggestions to improve your ALM.
- **Remediation:** For an additional fee, PDSA can help you implement the recommendations.
- **Here is a partial sample of our checklist:**
 - √ Labor Skills
 - √ Roles & Responsibilities
 - √ Project Management Practices
 - √ Design Review Practices
 - √ Project Status Controls
 - √ Test Plan Guide

Project Management Practices

Ensure your project managers know how to start, manage, and guide a software project from beginning to end. Ensure each of your PM's are performing these processes consistently.

Project Status Controls

Do you know where your project is in its lifecycle? Besides estimating guidelines, reporting tools are needed for developers to track where they are on a task. Are you keeping track of developer's time per task?

Design Review Practices

Performing a review of your software development process is vital to success. You need not only code reviews, but architecture and framework reviews too.
