Solutions for the Real World

Application Security Review

Are your applications industry compliant?

Businesses are being held accountable for any leak of private information about their customers. Make sure you are doing everything you can to ensure this does not happen to your business. We point out the best industry-standard practices and compliances that should be used in your applications to secure your business's most private information.

Why Choose PDSA…

PDSA develops custom business applications specializing in web and mobile technologies, enabling workflow management, operational efficiencies, and effective information management.

PDSA was founded in 1991 and since has successfully delivered advanced custom application software to a wide range of customers and diverse industries. With a team of dedicated experts, PDSA delivers cost effective solutions, on-time and on-budget using innovative tools and processes to better manage today's complex and competitive environment.

More Information

Call us toll-free at 888-899-PDSA (7372) and ask for Michael Krasowski or David Lefort. Email us at info@pdsa.com.

Can Someone Steal Your Business Secrets?

The PDSA Application Security Review identifies those areas in your application that have the potential to be a security risk to you! Our checklist provides a step-by-step process for inspecting the security of your application.

- **Findings**: Any security vulnerabilities in your application.
- **Reasons**: The reason why an item is a potential security risk.
- **Recommendations**: Our recommendations describing what should be done to improve or correct your application.
- **Remediation**: For an additional fee, PDSA can help you implement the recommendations.
- **Here is a very small sample of our checklist**:

  √ Common Web Attacks   √ Cryptography Usage

  √ Authentication Schemes   √ Cookie Usage

  √ Credit Card Usage   √ Page/Form Level Security

  And over 100 more items!

Common Attack Prevention

We identify and recommend courses of action to validate that you are not susceptible to SQL Injection Attacks, Cross-Site Scripting, Repeat Attacks, and many other web and Windows attacks employed by hackers.

Password Management

How you authenticate to an application can have many security ramifications. We will check each one and review them with you.

Privacy Policies

Many security procedures impact your customers and/or employees' privacy. These issues may have severe legal ramifications. We can help ensure you are compliant with the most up-to-date privacy policies.
