Is your SQL Server Running Efficiently?

SQL Server is a great database engine, but like anything if you don't tune it correctly even this engine can break down. We can help you by examining your server(s) and document those areas where you can improve the performance, security and management of your SQL Server.

Why Choose PDSA…

PDSA develops custom business applications specializing in web and mobile technologies, enabling workflow management, operational efficiencies, and effective information management.

PDSA was founded in 1991 and since has successfully delivered advanced custom application software to a wide range of customers and diverse industries. With a team of dedicated experts, PDSA delivers cost effective solutions, on-time and on-budget using innovative tools and processes to better manage today's complex and competitive environment.

Is your SQL Server performing well and is it secure?

We have been working with SQL Server for over 18+ years and through each version we have developed a complete checklist of what it takes to keep it running fast and secure. We know those areas that give you the most bang for your buck. We help you and your team identify areas that speed up performance and ensure the health of your server. We present a report back to you with the following:

- **Findings**: Items that need attention on your SQL Server.
- **Reasons**: The reason why an item is important to modify in your server.
- **Recommendations**: Our specific recommendations describing what should be done to improve or correct the server.
- **Remediation**: For an additional fee, PDSA can help you implement each of the recommendations.
- **Here is a very small sample of our checklist**:

√ Appropriate Hardware	√ Index Usage
√ Server Properties Set Correctly	√ Monitoring
√ Jobs and Maintenance Plans	√ Database Design

And over 95 more items!

Hardware
We will determine if the hardware you are running is appropriate for your organization. We will ensure that the databases are configured correctly on that hardware to ensure efficiency, security and redundancy.

Maintenance Plans
The correct Maintenance Plans in place on your servers will do a lot to ensure backups are being done correctly and your databases are running optimally. We will analyze your existing plans and make any necessary recommendations.

Database Design
A good database design is essential to performance and security. Our experts will perform an analysis of your databases and make recommendations on what you might do to improve performance and/or security.
