PAUL D. SHERIFF

Business/Technology Consultant

SKILLS

I am a skilled software architect centered around .NET, MVC, WPF, HTML, CSS, JavaScript, jQuery, SQL Server, and Angular. I love learning new business domains to which I can apply my programming skills. I am currently looking for part-time or small one-off projects to accomplish.

WORK EXPERIENCE

Paul D. Sheriff Consulting - [Business/Technology Consultant]
Sept. 2017 - Present

After selling my company, I now focus on helping my clients achieve their business and technology goals. I am currently assisting clients with the architecture of systems, programming, and mentoring. I continue to train, create training videos, write blogs and articles to help others achieve their programming goals.

PDSA, Inc. - [President]
Mar.1991 - Feb. 2017

I created PDSA with the goal of creating a software consulting company to work with clients to develop their systems that aligned with their business, instead of having to accept inferior off-the-shelf software. As the CEO and President, I helped architect software and guided my developers to provide our customers with custom business applications in desktop, web, and mobile technologies. PDSA successfully delivered advanced custom application software to a wide range of customers in diverse industries. I hand-picked a team of dedicated experts to ensure we delivered cost effective solutions, on-time and on-budget using innovative tools and processes.

During this time, I became an author on Visual Basic, C#, Web, and .NET technologies. I have been, and continue, to be a speaker at many different conferences and user groups around the world. I have been honored to have been a Microsoft Regional Director for many years. In 2013 I joined Pluralsight and have since published over 30 courses on various .NET and web technologies. In 2022 I am now publishing new courses on Udemy.com.
