

HTML Seminars

The following is a list of HTML seminars that can be presented at your user group or other live event by **Paul D. Sheriff**.

Essentials of HTML

HTML is the building blocks of web development. In this seminar you are given a thorough overview and understanding of what goes into creating a web page. Learn the basics of HTML elements and attributes through many examples.

Learning Objectives

The elements of HTML

Adding attributes

Creating tables and forms

Basic styling

Essentials of HTML 5

HTML 5 has a host of new structural and semantic elements that make your web pages more user-friendly. New attributes and input types make your web applications respond better on mobile devices as well. A new set of API's have been added such as geolocation, drag and drop, local and session storage. In this seminar you learn to take advantage of these new features to build great looking and responsive web pages.

Learning Objectives

New structural and semantic elements for web page design

New attributes for help on mobile devices

Learn to use geolocation, drag and drop and storage
